Structural analyses of asparagine-linked oligosaccharides of porcine pancreatic kallikrein.";
Biochemistry 27:7146-7154(1988).
-!- FUNCTION: Glandular kallikreins cleave Met-Lys and Arg-Ser bonds in kininogen to release Lys-bradykinin.
-!- CATALYTIC ACTIVITY: Preferential cleavage of Arg-|-Xaa bonds in small molecule substrates. Highly selective action to release kallidin (1ysyl-bradykinin) from kininogen involves hydrolysis of Met-|-Xaa or Leu-|-Xaa.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         "Refined 2-A X-ray crystal structure of porcine pancreatic kallikrein A, a specific trypain-like serine proteinase. Patent No. 5972616

GENERAL INFORMATION:
APPLICANT: O'Brien, Timothy J.
APPLICANT: Tanimoto, Hirotoshi
TITLE OF INVENTION: TANG-15: An Extracellular Serine Protease Overexpressed in TITLE OF INVENTION: Breast and Ovarian Carcinomas
FILE REFERENCE: D604
CURRENT APPLICATION NUMBER: US/09/027,337B

UNDMER OF SEQ ID NOS: 13

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence 4, Application US/09654600A

Sequence 4. Application US/09654600A

Patent No. 6649741

GENERAL INFORMATION:
APPLICANT: O'Brien, Timothy J.
APPLICANT: Tanimoto, Hirotoshi

TITLE OF INVENTION: TADG-15: An Extracellular Serine Protease
TITLE REFERENCE: D6064CIP/D

CURRENT APPLICATION NUMBER: US/09/654,600A

CURRENT FILING DATE: 2000-09-01
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            DB 2; Length 225;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         DB 4; Length 225;

The invention relates to diagnosing cancer especially ovarian cancer, by screening for stratum corneum chymotrypain enzyme (SCCB). Proteases are considered to be an integral part of tumour growth and metastasis, and therefore, markers indicative of their presence or absence are useful for the diagnosis of cancer. The method is useful for diagnosing cancer, carcinoma and malignant hyperplasia. The SCCE oligonucleotide may be used to treat a cancer selected from ovarian, breast, lung, colon, prostate and other cancers in which SCCE is overexpressed. The present sequence is
                                                                                                                                                                                                                                                                                                                                                                                                                                                Stratum corneum chymotrypsin enzyme; SCCE; cytostatic; vaccine; tumour; cancer; ovarian; breast; lung; colon; prostate; carcinoma; human; antisense therapy; malignant hyperplasia.
                                                                                                                                                                                                                                                                                                                                                                                                                           Human stratum corneum chymotrypsin enzyme peptide #5 (residues 6-14).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Diagnosing cancer comprises detecting stratum corneum chymotrypsin

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to a novel method for vaccinating an individual against stratum corneum chymotrytic enzyme (SCCE), comprising inoculating an individual with a SCCE peptide, which elicits an immune response in the individual with a SCCE peptide, which elicits an immune response in chymotrytic enzyme inhibitor. The SCCE peptide is useful for vaccinating an individual against SCCE, particularly an individual having, suspected or at risk of getting ovarian, lung, prostate, pancreatic or colon cancer. The oligonucleotide is useful for treating a neoplastic state in an individual, such as ovarian, breast, lung, colon, prostate, or pancreatic cancer, and other cancers in which SCCE is overexpressed. The peptides are also useful in the monitoring and development of immunotherapies for ovarian and other malignancies. The present sequence represents a peptide fragment of serine protease SCCE (stratum corneum chymotrytic enzyme).
                                                                                                                                                                                                                                                                                                                                                                                                                                                            Use of stratum corneum chymotrytic enzyme (SCCE) peptides, for vaccinating an individual against SCCE, and in monitoring and developing immunotherapies for ovarian and other malignancies.
                                                                                                                                                                                             Human stratum corneum chymotrytic enzyme peptide fragment SEQ ID NO:35.

The invention relates to isolated polymucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PGR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polymucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I is useful in gene therapy techniques to restore normal cutivity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polymucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                and to produce other types of data and products dependent on DNA and amino acid sequences. ABG00010-ABG30377 represent novel human diagnostic amino acid sequences of the invention. Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at the wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                  New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       4; Length 136;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 0; Indels

The present invention describes NOVX proteins, where X can be 1 to 55 (e.g. NOV1). Also described: (1) a composition comprising a polypeptide described above and a carrier; (2) a kit comprising, in one or more
                                                                       immunomodulator; cytostatic; nootropic; neuroprotective;
antiparkinsonian; antilipaemic; gene therapy; human disease;
metabolic disorder; diabetes; obesity; infection; cachexia; cancer;
neurodegenerative disorder; Alzheimer's disease; Parkinson's disease;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New NOVX polypeptides and nucleic acids, useful for diagnosing, preventing or treating NOVX-associated disorders, e.g. diabetes, cancer or dyslipidemia, and in chromosome mapping, tissue typing
                                                            human; NOVX; antidiabetic; anorectic; antibacterial; virucide;

containers, the composition described above; (3) an isolated nucleic acid molecule which encodes a NOVX protein of the invention; (4) a vector comprising the mucleic acid molecule dascribed above; (5) acell comprising the mucleic acid molecule above binds to the polypeptide or nucleic acid molecule in a presence or amount of the above polypeptide or nucleic acid molecule in a gample; (8) methods for determining the presence of or nucleic acid molecule in a cample; (8) methods for determining the presence of suppeptide or nucleic acid molecule in a first mammalian subject; (9) a method of identifying an agent that binds to the polypeptide described above; (10) a method for identifying a potential therapeutic agent for use in treating a pathology that is related to an aberrant expression or aberrant physiological interactions of the polypeptide; (11) a method of screening for a modulator of activity or of latency or predisposition to a pathology associated with the polypeptide; (13) methods of treating the athology associated with the above polypeptide in a mammal; and (14) a method for producing the above polypeptide in a mamunomodulator, cytostatic, nootropic, neuroprotective, antiparkinsonian in antilipaemic activities, and can be used in gene therapy. The polypeptide is useful in manufacturing a medicament for treating a syndrome associated with a human disease. The polypeptide or the nucleic acid can able used as hybridisation condisorers such as diabetes or obesity, infections, cachexia, cancer, advances such as diabetes or obesity, infections, cachexia, cancer, advanced energy in chromosome mapping, tissue typing, preventive medicine and bypobes, in chromosome mapping, tissue typing, preventive and various content in the process. The present sequence represents a human NOVX from the process.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                human; NOVX; metabolic disorder; diabetes; obesity; infectious disease; anorexia; cancer. associated cachexia; neurodegenerative disorder; Alzheimer's disease; Parkinson's disease; immune disorder;

probleming with the cells own genes and preventing their expression. Nova probe under an diagnostic assays to detect and quantitate the presence of probes in diagnostic assays to detect and quantitate the presence of similar sequences in samples, and so which patients may be in need of restorative therapy. NoVX polypeptides may also be used as antigens in the production of antibodies and in assays to identify modulators and antagonists) of the expression and activity of NoVX. The anti-NoVX polypeptide antibodies, agonists and antagonists may also be used to modulate NoVX polypeptide expression and activity of NoVX polypeptides. The anti-NoVX polypeptide antibodies may also be used to modulate NoVX polypeptide antibodies may also be used as diagnose and treat: metabolic disorders, diabetes, obesity, infectious disorders, Alzheimer's Disease, parkinson's Disorder, immune disorders, has antibacterial with obssity, the metabolic syndrome X and disturbances associated with obssity, the metabolic syndrome X and casticus and various dyslipidaemias, metabolic maxing disorders associated with chronic diseases and various cancer. They may also be used as antibacterial agents. The present sequence of a human NOVX protein.
                              NOVX polypeptides and polynucleotides are used to prevent, diagnose or treat a medical condition in human related to the aberrant expression and activity of NOVX polypeptides. For example, NOVX polypeptides and polynucleotides may be used to treat disorders associated with decreased expression or activity of NOVX by supplementing the patient our production or to rectify mutations. Conversely, antisense NA molecules may be administered to down regulate expression of NOVX polypeptides by binding with the cells own genes and preventing their expression. NOVX
                invention relates to isolated NOVX polypeptides and polynucleotides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       human; NOVX; antidiabetic; anorectic; antibacterial; virucide; immunomodulator; cytostatic; nootropic; neuroprotective; antiparkinsonian; antilipaemic; gene therapy; human disease; metabolic disorder; diabetes; obesity; infection; cachexia; cancer; neurodegenerative disorder; Alzheimer's disease; Parkinson's disease; immune disorder; haematopoietic disorder; dyslipidaemia.

New NOVX polypeptides and nucleic acids, useful for diagnosing, preventing or treating NOVX-associated disorders, e.g. diabetes, obesity, cancer or dyslipidemia, and in chromosome mapping, tissue typing or pharmacogenomics

Claim 1; Page 169-170; 586pp; English.

The present into acstribes NOVA process.

(e.g. NOVI). Also described: (1) a composition comprising a polypeptide described above and a carrier; (2) a kit comprising, in one or more containers, the composition described above; (3) an isolated nucleic acid molecule which encodes a NOVX protein of the invention; (4) a vector comprising the nucleic acid molecule described above; (5) a cell comprising the nucleic acid molecule described above; (5) a cell comprising the nucleic acid molecule described above; (5) a cell comprising the above vector; (6) an antibody that immunospecifically by chinds to the polypeptide described above; (7) methods for determining the presence or amount of the above polypeptide or nucleic acid molecule in a sample; (8) methods for determining the presence of or predisposition to a disease associated with altered levels of expression of the above; (10) a method for identifying a potential therapeutic agent for use in treating a pathology that is related to an aberrant expression or aberrant physiological interactions of the polypeptide; (11) a method of screening for a modulator of activity or of latency or predisposition to comprise apathology associated with the polypeptide; (12) a method for modulating the activity of the polypeptide described above; (13) methods of treating contributions and antiliparemic activities, and can be used in gene therapy. The polypeptide is useful in manufacturing a medicament for treating a condition and modulator of and antiliparemic activities, and can be used in gene therapy. The colypeptide is useful in manufacturing a medicament for treating a colyperine associated with a human disease. The polypeptide or produced manual and present may be used in gene therapy. The colypeptide is useful in manufacturing a medicament for treating a colyperine may be used in gene therapy. acid molecule may be used to diagnose, treat or prevent metabolic disorders such as diabetes or obesity, infections, cachexia, cancer, neurodegenerative disorders such as Alzheimer's disease or Parkinson's disease, immune disorders, haematopoietic disorders and various The present invention describes NOVX proteins, where X can be 1 to

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ઠે
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to isolated NOVX polypeptides and polynucleotides.

NOVX polypeptides and polynucleotides are used to prevent; diagnose or treat a medical condition in human related to the aberrant expression and activity of NOVX polypeptides. For example, NOVX polypeptides and cativity of NOVX by supplementing the patient our production or activity of NOVX by supplementing the patient our production or to rectify mutations. Conversely, antisense NA molecules may be administered to down regulate expression of NOVX polypeptides by binding with the cells own genes and preventing their expression. NOVX binding with the cells own genes and preventing their expression. NOVX binding with the cells own genes and preventing their expression. NOVX polypeptides and complementary sequences may also be used as DNA probes in diagnostic assays to detect and quantitate the presence of similar sequences in samples, and so which patients may be in need of setorative therapy. NOVX polypeptides may also be used as antigens in the production of antibodies and in assays to identify modulators (agonists and antagonists) of the expression and activity of NOVX. The anti-NOVX polypeptide antibodies, agonists and antagonists may also be used as antigens in the anti-NOVX polypeptides may also be used as diagnostic agents for detecting the presence of NOVX in samples. NOVX polypeptides and polymelectides may be used in this way to prevent, and the various disseas, nectabolic disorders, diabetes, obesity, infectious dissease, anorexia, cancer, cancer associated acheeving may be used and disorders, and the various dyslipidaemias, metabolic disorders, and the various dyslipidaemias, metabolic disorders, and the various dyslipidaemias, metabolic disorders, and the warious diseases and various associated with observe the metabolic syndrome x and care associated with chronic diseases and various associated with observe the metabolic diseases and various cancers.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Dipippo VA;

This invention describes a novel non-human transgenic mammal or mammalian sequence comprising at least a significant part of a nucleotide sequence comprising at least a significant part of a nucleotide sequence coding for a stratum corneum chymotryptic enzyme (SCCE) or its variant; occupant in skin. The product of the invention is useful as a model for its variant in skin. The product of the invention is useful as a model for the study of disease with the aim of improving treatment, to relieve or ameliorate a pathogenic condition, for development or testing of a comment or a paramaceutical formulation, and for the development of a diagnostic method. It can also be useful for screening or identifying a composition effective for the prevention or treatment of an abnormal or unwanted phenotype, and for screening or identifying a compound or composition effective for the prevention or treatment of an abnormal or composition effective for the prevention or treatment of an abnormal or composition effective for the prevention or treatment of an abnormal or composition effective for the prevention or treatment of an opposition and paramaceum diseases scale compound or composition effective for the prevention or treatment of an opposition and paramaceum and inherited skin diseases

Compound or composition effective for the prevention or treatment of an opposition and hyperkeracosis, epidermal inflammation, dermal inflammation, bruttus, atopic dermatitis, eczema, acne and inherited skin diseases

Compound or composition effective for the prevention or treatment of an anodel for further studies of itch mechanisms and the testing of potential compounds and compositions for relieve of various skin diseases
                                                                                                                                                                                                                                                                                                                                                           Transgenic mammal or its embryo useful as model for human disease, has heterologous nucleotide sequence coding for stratum corneum chymotryptic enzyme operably linked to promoter that drives its expression in skin.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           SCCE; human; stratum corneum chymotryptic enzyme; kallikrein 7; serine protease; krin cancer; hyperkeretosis; acanthosis; epidermal inflammation; dermal inflammation; pruritus; atopic dermatitis; eczema; acne; itch; KLK7; enzyme.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   human stratum corneum chymotryptic enzyme, SCCE

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Human amyloid precursor protein protease (AAW05383) is involved in the processing or clearance of amyloid precursor protein to form beta-amyloid peptide. Its amino acid sequence was deduced from a cDNA clone (AAT39783) obtd. from a human lung library. Recombinant protease can be produced in transformed or transfected prokaryotic (partic. E. coli) or eukaryotic appartic. N-120 host cells. It is used to develop products for the design and testing of cpds. useful for treating or preventing conditions associated with beta-amyloid peptide, esp. Alzheimer's disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     SCCE; human; stratum corneum chymotryptic enzyme; kallikrein 7; serine protease; kransgenic mammal; skrin; skrin disease; skrin cancer; hyperkertatosis; acanthosis; epidermal inflammation; derma inflammation; pruritus; atopic dermatitis; eczema; acne; itch; KLK7; enzyme.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   This invention describes a novel non-human transgenic mammal or mammalian embryo having integrated within its genome, a heterologous nucleotide sequence comprising at least a significant part of a nucleotide sequence comprising at least a significant part of a nucleotide sequence coding for a stratum corneum chymotryptic enzyme (SCCE) or its variant, or stratum corneum chymotryptic enzyme (SCCE) or its variant, or product of the invention is useful as a model for the study of disease with the aim of improving treatment, to relieve or ameliorate a pathogenic condition, for development or testing of a commodition at a pharmaceutical formulation, and for the development of a diagnostic method. It can also be used as a model for screening or identifying a composition effective for the prevention or treatment of an abnormal or unwanted phenotype, and for screening or identifying a compound or composition effective for the prevention or treatment of an abnormal or unwanted phenotype, and for screening or identifying a compound or composition effective for the prevention or treatment of the inflammatory skin diseases selected from diseases consisting of epidermal hyperkeratosis, accema, acne and inherited skin diseases with epidermal hyperkeratosis. The mammal of the invention is also useful as a model for further studies of itch mechanisms and the testing of potential compounds and compositions for relieve of various skin diseases where itch is a component This sequence represents the human stratum corneum chymotryptic enzyme, SCCE which is a serine protease synonymous with human kallikrain 7 (KLKT) and is used in the development of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ó
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Human; protease; cancer; immune-related disorder; cardiovascular disease; neuronal-associated disease; metabolic disorder; inflammatory disorder; nervous system disorder; sexual dysfunction; pain; mood disorder; hypertension; psychotic disorder; neurological disorder; dyskinesia;
                                                                                                                                                                                                                                                Transgenic mammal or its embryo useful as model for human disease, has heterologous nucleotide sequence coding for stratum corneum chymotryptic enzyme operably linked to promoter that drives its expression in skin.

```
The present invention relates to the isolation of novel human proteases, and the nucleic acids encoding them. The sequences of the invention are useful for treating diseases and disorders such as cancers (e.g. breast, colon, lung), immune-related diseases and disorders (e.g. inflammatory diseases and asthma), cardiovascular diseases (e.g. restenosis and coronary thrombosis), brain or neuronal-associated diseases, metabolic disorders (e.g. diabetes, obesity), inflammatory disorders (e.g. diabetes, plan, sexual dysfunction, mood disorders, attention disorders, cognition disorders, hypotension, hypotension, psychotic disorders, neurological disorders (e.g. Alzheiner's disease, Parkinson's disease) and dyskinesias. The nucleic acids and polypeptides are also useful for treating viral infections such as ocular disease (e.g. virus (HIV), and non-viral infections such as ocular disease (e.g. glaucoma) and macular degeneration. AAU82702-AAU82760 represent the novel
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Nucleic acids encoding novel human proteases, useful for useful for treating diseases and disorders such as cancers, immune-related diseases and disorders, cardiovascular disease (e.g. restenosis) and inflammatory

The invention describes genes (1) which are differentially regulated in prostate cancer. (2) Is useful for diagnosing a prostate cancer in a semple comprising prostate tissue, which involves determining the number of target genes which are differentially-regulated in the sample, where the number is indicative of the probability that the sample comprises to prostate cancer. (1) Is useful for assessing a therapeutic or preventive intervention in a subject having a prostate cancer, which involves cancer certains which are differentially-regulated in prostate cancer. (7) Is also useful for identifying agents that modulate a biological activity of a polypeptide differentially-regulated in prostate cancer. (2) Is also useful for identifying agents that modulate a biological activity of a polypeptide differentially-regulated in prostate cancer cells, which involves contacting a polypeptide differentially-regulated in prostate cancer. (2) is useful as molecular markers, as expension detecting, the test agent to modulate a biological activity of the polypeptide, and concert cells with a test agent modulates the biological activity. (1) is useful as molecular markers, as enty targets, and for detecting, diagnoshing, staging, grading, assessing, monitoring, prognosticating, conditions especially relating to prostate cancer. (1) and its expression conditions especially relating to prostate cancer. (1) and its expression products are used in the diagnostic test to assay for presence of cancer e.g., in tissue sections, in blopps, assay for presence of cancer e.g., in the polypeptide and thus conditions especially be used for expressing the polypeptide and thus conditions especially be used for expressing the polypeptide and thus conditions are used in the diagnostic test prostate cancer. The identification of specific penes, and groups of genes, expressed in pathways which are useful in diagnostic, therapeutic, and the in prostate cancer permine the definition of a pathways which are useful in prostate cancer permine the pre
                                                                                                                                                                                                                                                                                                                                                              Novel genes which are differentially regulated in prostate cancer, useful for diagnosing prostate cancer in prostate tissue sample and assessing therapeutic or preventive intervention in prostate cancer patients.
                                                                                                                                                                                                                                                                                                                                                                                                                                                             Claim 1; Page 293-294; 416pp; English

Claim 1; Page 351; 416pp; English.

```
The invention describes genes (I) which are differentially regulated in prostate cancer. (I) Is useful for diagnosing a prostate cancer in a sample comprising prosecte tissue, which involves determining the number of target genes which are differentially—regulated in the sample, where the number is indicative of the probability that the sample comprises prostate cancer. (I) Is useful for assessing a therapeutic or preventive intervention in a subject having a prostate cancer, which involves concerned the expression levels in a sample comprising prostate tissue of target genes which are differentially—regulated in prostate cancer. (C intervention in a subject having a prostate cancer, which involves contacting a polypeptide differentially—regulated activity of a polypeptide differentially—regulated activity of a polypeptide differentially—regulated cancer cells which involves contacting a polypeptide differentially—regulated in prostate cancer cells with a test agent under conditions effective for the test agent to modulate a biological activity (I) is useful as molecular markers, as drug targets, and for detecting, determining whether the test agent modulates the biological activity. (I) is useful as molecular markers, as drug targets, and for detecting, determining predisposition to disease and conditions especially relating to prostate cancer. (I) and its expression conditions especially relating to prostate cancer. (I) and its expression products are used in the diagnostic, then atture of genetic of cancer of cancer. (I) is useful for assessing cancer e.g., to determine the type of cancer. (I) a useful for assessing cancer e.g., to determine the type of cancer. (I) suspended by (I) can be used as target for therapy or drug discovery. (I) can also be used for expressing the polypeptide and groups of genes, expressed in pathways in the suspended and disease pathways and the delineation of targets in these pathways which are useful in disapnostic, therefore the polypeptide and disease pathways and the delineate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 pathways which are useful in diagnostic, therapeutic, and clinical applications. This is the amino acid sequence of a protein diferentially regulated in prostate cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence 253 AA;

The invention relates to a novel isolated polynucleotide. The polynucleotides of the invention have cytostatic activity, and may have a use in gene therapy, and in a vaccine. The composition and methods are useful in diagnosing and/or treating cancer, particularly ovarian cancer. The composition may also be used as a vaccine to prevent cancer. The present sequence is used in the exemplification of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New polynucleotide and polypeptide useful for diagnosing and/or treating cancer, particularly ovarian cancer, and as a vaccine.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Human stratum corneum chymotryptic enzyme - ovarian cancer clone 01676P.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Human; cytostatic; gene therapy; vaccine; cancer; ovarian cancer.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

First FUNCTION: May catalyze the degradation of intercellular cohesive structures in the catalyze the degradation of intercellular cohesive structures in the conflict layer of the skin in the continuous shedding of cells from the skin surface. Specific for amino acid residues with aromatic side chains in the Pl position. SCE cleaves insulin B chain at 6-Leu-| -Cys-7, 16-Tyr-| -Leu-17, 25-Phe-|-Tyr-26, and 26-Tyr-|-Thr-27. Could play a role in the activation of precursors to inflammatory cytokines.

-!- TISSUE SPECIFICITY: Abundantly expressed in the skin and is expressed by keratinocytes in the epidermis. Very low levels are also seen in the brain and kidney.

-!- SIMILARITY: Belongs to the peptidase SI family. Kallikrein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              PRINTS; PR00722; CHYMOTRYBSIN.

J. Folycriow: Inhibins and activins inhibit and activate, respectively, the secretion of follitropin by the pituitary gland. Inhibins/activins are involved in regulating a number of diverse functions such as hypochalamic and pituitary hormone secretion, gonadal hormone secretion, escretion, erythroid differentiation, insulin secretion, nerve cell survival, embryonic axial development or bone growth, depending on their subunit composition. Inhibins appear to oppose the functions of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                MEDLINE=99027340; PubMed=9801457; Vammontfort D., Fidler A.B., Heath D.A., Lawrence S.B., Tisdall D.J., Greenwood P.J., McNatty K.; Greenwood P.J., McNatty K.; Greenwood P.J., mcDNA sequence analysis, gene expression and protein localisation of the inhibin alpha subunit of Australian brushtail possum (Trichosurus

Sequence 2, Application US/08557146

Patent No. 5834290

GENERAL INFORMATION:

APPLICANT: Bealrud, Torbjorn

APPLICANT: Hansson, Lennart

TITLE OF INVENTION: Recombinant Stratum Corneum Chymotryptic

TITLE OF INVENTION: Enzyme (SCCE)

NUMBER OF SEQUENCES: 17

CORRESPONDENCE ADDRESS:

ADDRESSEE: White & Case, Patent Department

STREET: 1155 Avenue of the Americas

CITY: New York

STREET: New York

COUNTRY: U.S.A.

ZIP: 10036-2787

COMPUTER READABLE FORM:

MEDIUM TYPE: Floppy disk

COMPUTER: IBP C compatible

OPERATING SYSTEM: PC-DOS/MS-DOS

SOFTWARE: PatentIn Release #1.0, Version #1.25 (BPO)

CLASSIFICATION NUMBER: US/08/557,146

FILING DATE: 14-DEC-1995
                                                                                                                                            .;
